            The API key for Google Maps-based APIs is defined as a
string resource.
            (See the file "res/values/google_maps_api.xml").
            Note that the API key is linked to the encryption key
used to sign the APK.
            You need a different API key for each encryption key,
including the release key that is used to
            sign the APK for publishing.
            You can define the keys for the debug and release targets
in src/debug/ and src/release/.
